

9 - Output Enclosure Day 2

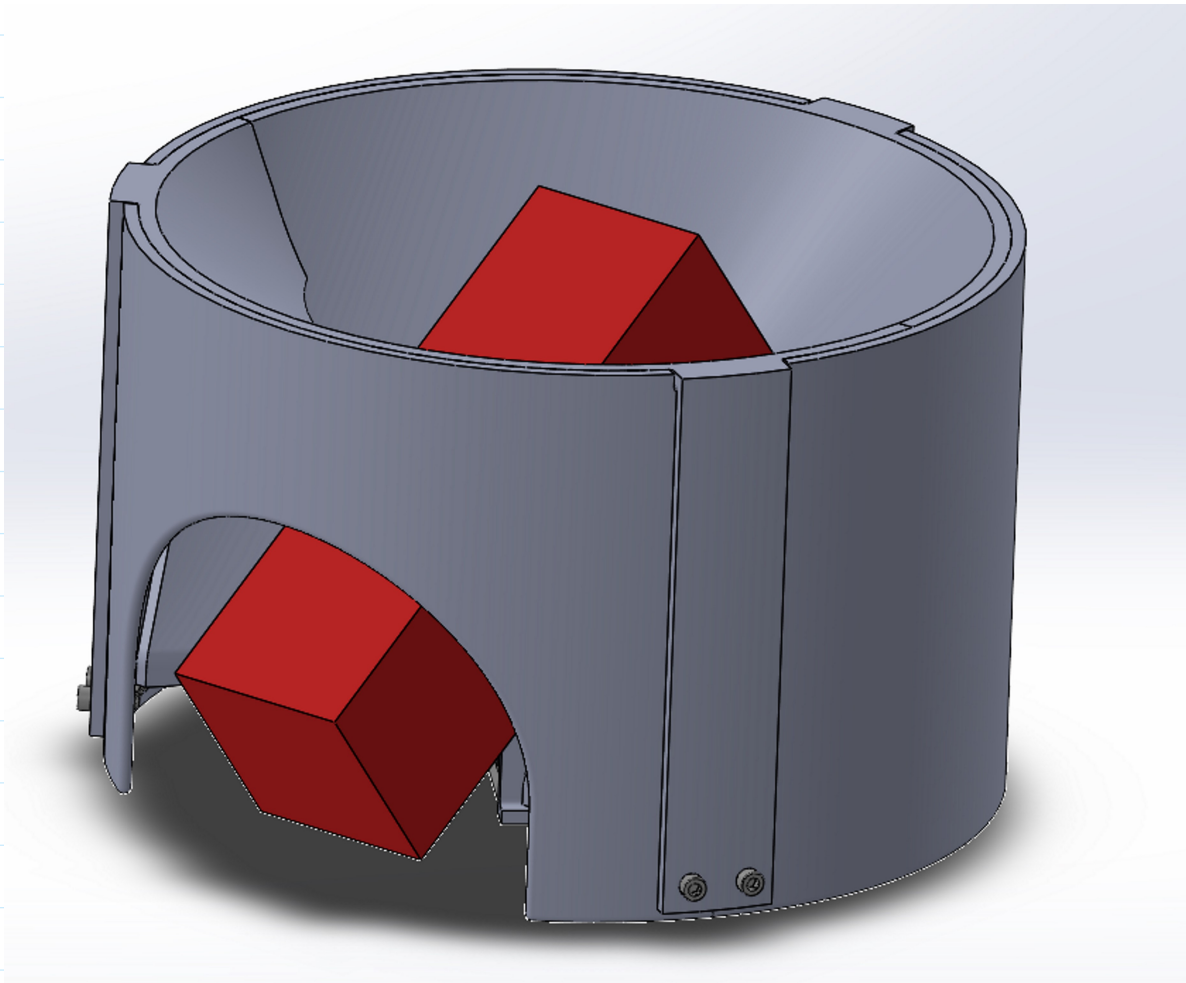

March 16, 2021 10:26 AM

START : 10:30

END : 12:30

- decided to go with 1 set of fasteners per bracket (at bottom) for ease of assembly (1)
- added lip to create guiding slot for top of shell instead of explicitly fastening it (2)

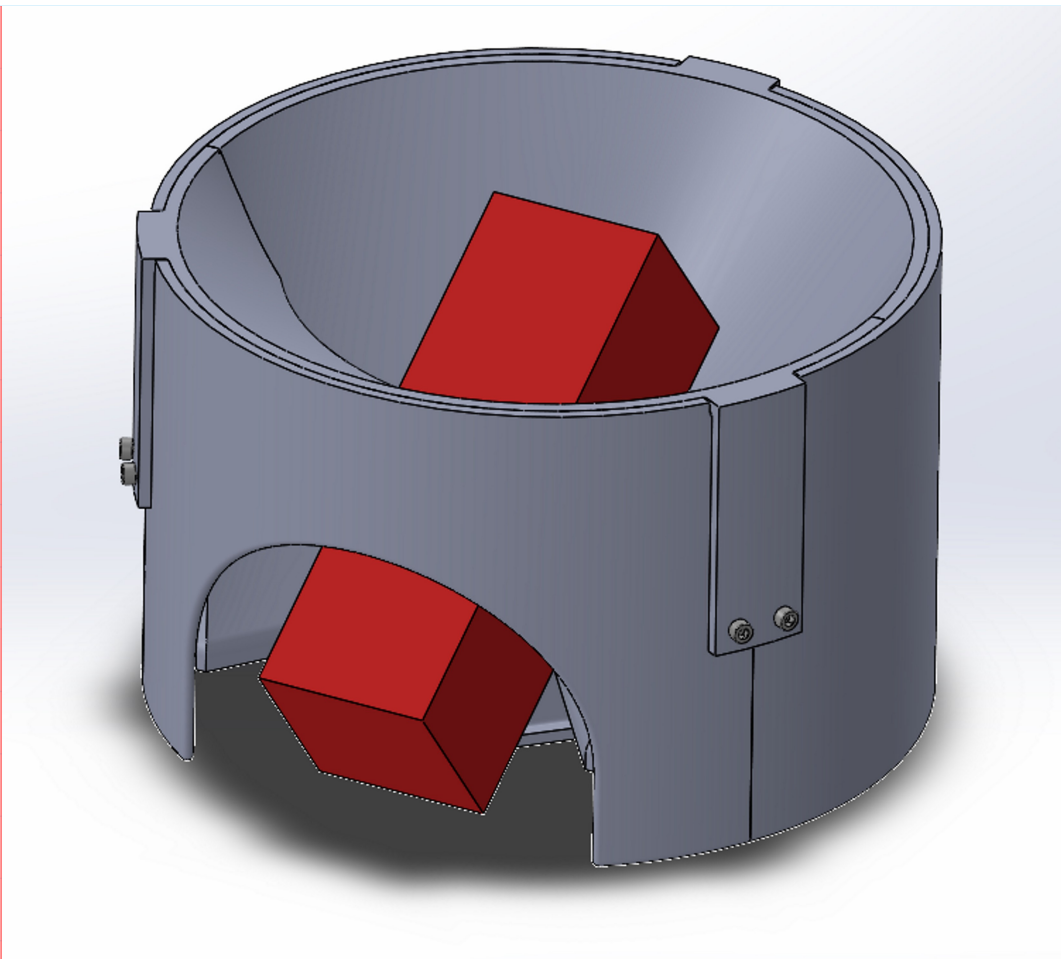

- complete design (for now)

→ talking with Ethan about adjusting tabs

→ shorten (to shorten moment arm & strengthen, especially since it'll have to be printed in such a way that shear/weak points on layer lines may be a concern)

START: 1:45 PM

END: 2:00 PM

- shortened brackets
 - shorter moment arm - less likely to snap off
 - still have space from below for fairly easy assembly
